

AutoRABIT ARM for nCino

Get 1-Click deployments and updates with DevOps automation for your nCino Bank Operating System® environment that supports compliance and security while reducing your operating costs

1-Click Deployments To Get Up and Running Fast

Get up and running quickly with our 1-click deployment model for initial deployments and monthly updates. AutoRABIT ARM for nCino eliminates the potential for the errors inherent in manual deployments or solutions requiring multiple steps. Initial deployments and updates deploy quickly and error-free with our fully automated operation model.

Meet Compliance and Extended IT Security Requirements

Financial institutions' pervasive use of sensitive data, Personally Identifiable Information (PII), and needs to meet strict legal and regulatory mandates require a clear focus on compliance and security in every aspect of operations. To meet these needs, ARM for nCino supports audit requirements, helps organizations comply with risk management frameworks, and protects sensitive data with critical certifications and capabilities. Certifications for ISO 27001, SOC2, and HIPAA are the starting point, with capabilities that include RBAC, encryption, data sovereignty support, audit logs/reports, and more.

AutoRABIT's Single Platform for nCino DevOps and DataOps

AutoRABIT ARM for nCino and Vault for nCino share a common platform that reduces the complexity of nCino Bank Operating System® development, deployment, and management while enabling security and compliance. AutoRABIT Vault for nCino adds to ARM for nCino fast, fully compliant backup, recovery, archiving, and sandbox seeding that helps organizations save money, meet RPO and RTO requirements and deploy with confidence.

Save Money and Time with DevOps Processes and Immediate Access to New nCino Features

AutoRABIT's DevOps version control, auditing, and single automated pipeline for data and features enhance nCino customization deployment and speed. And, when nCino makes available new features, you'll immediately be able to find, configure and deploy them into your organization's nCino environment.

Built for nCino Security and Compliance at Speed

AutoRABIT's Platform is Certified and Compliant

Flexible deployment models support risk reduction, privacy, cost control and security

SaaS

Self-Managed Cloud

On-Premises

Increase velocity and quality with unlimited Salesforce metadata control

- Salesforce metadata is unique
- Metadata properties inherit, propagate and nest
- Every action creates metadata
- Bad metadata breaks orgs, slows development

Release New Features and Customizations with Speed and Precision for an Edge In Your Market

DevOps capabilities promote quality and deployment speed with version control support for nCino feature templates and data sets in a single toolset - as well as advanced capabilities such as the immediate availability of updated and new nCino features.

KEY FEATURES

Deployment Capabilities:

- Seamless 1-Click deployment for initial deployment and faster new content deployment with lower costs and fewer errors – Deploy as-is or using your organization’s data
- Automate deployments with a single pipeline and version control repository for Salesforce metadata and nCino features.
- Immediate access to nCino feature templates after installation
- Support for new nCino Bank Operating System® standard features as soon as they are released

nCino Feature Versioning:

- Version control enables Salesforce teams supporting nCino to collaborate, track and manage changes across multiple versions
- With AutoRABIT ARM for nCino, gain the advantages of using a version control system with nCino feature templates
- Detailed information on commit and change history

Extended Capabilities for nCino :

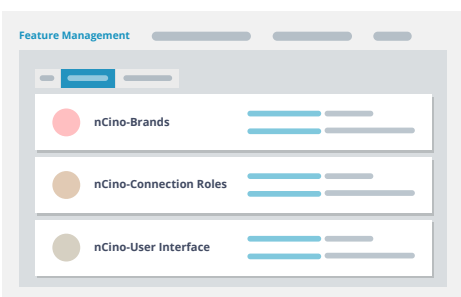

- Easy feature migration to add pre-defined Standard or Community features into production or development and QA Salesforce Sandboxes
- Create your own nCino feature templates

Secure & Compliant:

- Flexible deployment options –SaaS, Public/Private IaaS, On-premises.
- Certified – ISO 27001 certified, HIPAA compliant, SOC 2 certified.
- Encryption – data-at-rest/in-motion, Salesforce Shield support
- Access controls – RBAC enabled with integration to SSO (available for an additional fee) environments that support multi-factor authentication.
- Audit and eDiscovery support – Detailed reporting of who, when, where and changes made by developers, admins, release managers, etc.
